RE: Field Inspection, Standard Gypsum Products Incorporated,  
Bloomington Hills Project, S/053/007, Washington County,  
Utah

On June 14, 1989, Wayne Hedberg inspected the Bloomington Hills gypsum quarry. The purpose of the inspection was to observe the current status of mine site development since the last December 1, 1988 field inspection.

No activity was witnessed during the field inspection. There was no mining equipment located on the site. It was apparent that a very minor amount of gypsum may have been quarried and/or stockpiled on the site. Overall, there was little change noted since the December 1, 1988 field inspection. No environmental problems were noted during the site inspection. Surface disturbance was visually estimated at about 2 - 2 1/2 acres, not including access roads.
